

ADITYA CHOUHAN

GTM / REVENUE SYSTEMS ENGINEER | AI-NATIVE GTM | REVENUE INFRASTRUCTURE

India | Open to Global / Remote | ai.adityachouhan@gmail.com | Portfolio | GitHub | LinkedIn

SUMMARY

GTM / Revenue Systems Engineer building AI-native revenue infrastructure across CRM, data, automation and account intelligence. Combines Python, SQL and API engineering with hands-on GTM strategy, outbound execution and team leadership. Claude Certified Architect - Professional with experience at AI and SaaS companies and a public portfolio of 17 GTM engineering systems spanning Claude, Salesforce, HubSpot, n8n, dbt, BigQuery and backend infrastructure.

EXPERIENCE

SYDON.AI | GTM ENGINEER

2026 | Remote

Scope: Revenue Systems | GTM Strategy | Team Leadership

- Architected and operated **AI-native GTM systems supporting 25,000+ prospects**, connecting account discovery, enrichment, qualification, AI-assisted research, CRM workflows and sales activation.
- Built signal-driven workflows that supported **150+ qualified meetings and 35+ sales opportunities**, representing approximately **23% meeting-to-opportunity conversion** across the tracked cohort.
- Reduced typical prospect-preparation time from approximately **15-20 minutes to under 5 minutes per account** through AI-assisted account research and qualification workflows.
- Built and maintained **10+ operational GTM workflows** spanning discovery, enrichment, scoring, account intelligence, CRM synchronization, routing and outbound activation.
- Designed prioritization logic combining **ICP fit, commercial relevance, intent, engagement and recency signals** to focus execution on higher-propensity accounts.
- Helped shape ICP, segmentation, buying-trigger and GTM-play strategy, translating product capabilities into commercial use cases, targeting logic and repeatable account motions.
- Led day-to-day GTM execution across a small commercial team, translating priorities into campaign plans, playbooks, ownership and operating cadence; partnered across product, growth and commercial functions.

MAPOG | GTM ENGINEER / FIRST OUTBOUND HIRE

2025-2026 | Remote

Scope: GTM Systems | Outbound Strategy | Team Leadership

- Helped build MAPOG's outbound motion and supporting **GTM systems infrastructure from zero**, spanning ICP development, prospect intelligence, enrichment, automation, qualification and campaign execution.
- Processed **20,000+ targeted prospects** through automated sourcing, enrichment, research and qualification workflows.
- Generated and supported **600+ qualified product demos across ~12 months** while responsibilities expanded from initial outbound execution into GTM systems, strategy and team execution.
- Built **8+ automated GTM workflows** connecting Clay, Apollo, Bright Data, n8n and CRM infrastructure.
- Reduced typical prospect research and preparation from approximately **15 minutes to under 5 minutes per account** through reusable enrichment, research and qualification workflows.
- Defined and iterated ICP, segmentation, targeting criteria, qualification rules and campaign plays using downstream market response to refine execution.
- Led execution across a small GTM team, establishing campaign planning, prospecting standards, outreach playbooks and performance-review cadence.

HAHAHA MARKETING | CO-FOUNDER

2022-2025

- Co-founded and operated a client-services business, owning customer acquisition, positioning, campaign strategy and delivery, building early experience in entrepreneurship, commercial execution and client leadership.

SELECTED ENGINEERING

CLAUDE GTM REVENUE AGENT | [GitHub](#)

[Python](#) | [FastAPI](#) | [Claude API](#) | [PostgreSQL](#) | [Docker](#) | [GitHub Actions](#)

Built a production-style AI revenue-agent architecture that transforms real public market signals into structured, evidence-grounded account intelligence.

- Implemented a Claude Messages API agent loop with strict tool schemas, structured outputs, retries, token/cost instrumentation and grounding evaluation; added budget guards, explicit human review and fail-closed CRM boundaries.
- Built FastAPI/PostgreSQL services with health and readiness endpoints, OpenAPI, Prometheus metrics, Docker and GitHub Actions CI.
- Committed reproducible **live openFDA ingestion evidence** while explicitly separating real signal ingestion from offline mock briefs and operator-key-dependent live Claude execution; no live-model result or business outcome is claimed.

REVOPS SYNC CONTROL PLANE | [GitHub](#)

[Python](#) | [FastAPI](#) | [HubSpot API](#) | [Salesforce](#) | [PostgreSQL](#)

Built an auditable HubSpot/Salesforce reconciliation control plane for maintaining consistent account state without hiding identity or conflict decisions.

- Implemented deterministic identity resolution, field-ownership policies, immutable conflict tracking and idempotent outbox logic with PostgreSQL-backed state, bounded retries and observability.
- Validated **real company create/update behavior in a HubSpot developer test portal**, including repeated updates to identical object IDs; kept Salesforce explicitly preview-only.
- Achieved **27/27 local tests with 93% statement coverage**. BigQuery/dbt/Terraform remains a reviewable, explicitly undeployed path.

SALESFORCE GTM SIGNAL LAYER | [GitHub](#)

[Salesforce](#) | [Apex](#) | [Flow](#) | [SOQL](#) | [Metadata](#)

Built and deployed a signal-driven GTM architecture in a Salesforce Developer Edition org for prioritization, routing and lifecycle governance.

- Created a custom GTM signal object and Lead intelligence fields with before-save Flow routing, validation safeguards, field-level security and permission controls.
- Built bulk-safe Apex rollups and scheduled signal-decay processing; validated behavior through a **200-record transaction test** designed to keep SOQL and DML usage flat.
- Achieved **20/20 Apex tests passing and 96% org-wide Salesforce code coverage**.

GTM DATA WAREHOUSE | [GitHub](#)

[dbt Core](#) | [BigQuery](#) | [DuckDB](#) | [SQL](#) | [Dimensional Modeling](#)

Built a dimensional GTM warehouse spanning accounts, market signals, touches, opportunities and funnel reporting with explicit real/synthetic data boundaries.

- Developed staging, dimensional and incremental fact models with documented lineage and reusable quality tests.
- Achieved **35/35 data tests passing; full dbt build PASS=46, WARN=0**. The same 35 tests pass on DuckDB and a real BigQuery sandbox.
- Identified and fixed two cross-engine portability issues surfaced only by executing against BigQuery; kept real upstream signal data explicitly separate from synthetic touches and opportunities.

TECHNICAL SKILLS

Programming: Python, SQL, Apex, SOQL, JavaScript

Backend & APIs: FastAPI, PostgreSQL, REST APIs, webhooks, API integrations

AI Systems: Claude API, tool-using LLM workflows, structured outputs, grounding, evaluation, human-in-the-loop design

CRM & GTM Systems: Salesforce, Salesforce Flow, HubSpot, Clay, Apollo, lead scoring, routing, enrichment, lifecycle architecture

Automation & Data: n8n, retry/failure handling, idempotency, BigQuery, dbt Core, DuckDB, dimensional modeling, ETL/ELT, data quality

Infrastructure & Observability: Docker, GitHub Actions CI, Prometheus, structured logging, health/readiness checks

GTM Strategy: ICP development, segmentation, signal-based prospecting, outbound strategy, experimentation, funnel analytics

CERTIFICATION & EDUCATION

Claude Certified Architect - Professional | [Anthropic](#) | 2026 | **Bachelor of Business Administration - Marketing**
