

ADITYA CHOUHAN

GTM ENGINEER | AI & REVENUE SYSTEMS

Mumbai, India | Open to global and remote roles | [Email](#) | [Portfolio](#) | [GitHub](#) | [LinkedIn](#)

SUMMARY

GTM Engineer focused on AI and revenue systems across account intelligence, CRM workflows, automation and revenue analytics. Combines Python, SQL and API engineering with hands-on outbound operations at Sydon.ai and MAPOG. Public implementations document what executed live, what is simulated and what remains preview-only.

EXPERIENCE

SYDON.AI | GTM ENGINEER

2026 | Remote

Scope: Revenue Systems | GTM Strategy | Team Leadership

- Architected and operated AI-native GTM systems supporting 25,000+ prospects, connecting account discovery, enrichment, qualification, AI-assisted research, CRM workflows and sales activation.
- Built signal-driven workflows that supported 150+ qualified meetings and 35+ sales opportunities, representing approximately 23% meeting-to-opportunity conversion across the tracked cohort.
- Reduced typical prospect-preparation time from approximately 15-20 minutes to under 5 minutes per account through AI-assisted account research and qualification workflows.
- Built and maintained 10+ operational workflows spanning discovery, enrichment, scoring, account intelligence, CRM synchronization, routing and outbound activation.
- Designed prioritization logic combining ICP fit, commercial relevance, intent, engagement and recency signals to focus execution on higher-propensity accounts.
- Helped shape ICP, segmentation, buying-trigger and GTM-play strategy; led day-to-day execution across a small commercial team and partnered across product, growth and commercial functions.

MAPOG | GTM ENGINEER / FIRST OUTBOUND HIRE

2025-2026 | Remote

Scope: GTM Systems | Outbound Strategy | Team Leadership

- Helped build the outbound motion and supporting GTM systems infrastructure from zero, spanning ICP development, prospect intelligence, enrichment, automation, qualification and campaign execution.
- Processed 20,000+ targeted prospects through automated sourcing, enrichment, research and qualification workflows; generated and supported 600+ qualified product demos across approximately 12 months.
- Built 8+ automated workflows connecting Clay, Apollo, Bright Data, n8n and CRM infrastructure; reduced typical prospect research and preparation from approximately 15 minutes to under 5 minutes per account.
- Defined and iterated ICP, segmentation, targeting criteria, qualification rules and campaign plays using downstream market response to refine execution.
- Led execution across a small GTM team, establishing campaign planning, prospecting standards, outreach playbooks and performance-review cadence.

HAHAHA MARKETING | CO-FOUNDER

2022-2025

- Co-founded and operated a client-services business, owning customer acquisition, positioning, campaign strategy and delivery.

SELECTED ENGINEERING

CLAUDE GTM REVENUE AGENT | Python | FastAPI | Claude API | PostgreSQL | Docker

Production-style AI revenue-agent architecture that transforms real public market signals into structured, evidence-grounded account intelligence.

- Implemented a Claude Messages API agent loop with strict tool schemas, structured outputs, retries, token and cost instrumentation, grounding evaluation, budget guards and explicit human review.
- Built FastAPI and PostgreSQL services with health/readiness endpoints, OpenAPI, Prometheus metrics, Docker and GitHub Actions CI.
- Committed reproducible live openFDA ingestion evidence while separating real signal ingestion from offline mock briefs and operator-key-dependent live Claude execution; no live-model business outcome is claimed.

REVOPS SYNC CONTROL PLANE | Python | FastAPI | HubSpot API | Salesforce | PostgreSQL

Auditable HubSpot and Salesforce reconciliation control plane for maintaining consistent account state without hiding identity or conflict decisions.

- Implemented deterministic identity resolution, field-ownership policies, immutable conflict tracking and idempotent outbox logic with PostgreSQL-backed state, bounded retries and observability.
- Validated real company create/update behavior in a HubSpot developer test portal; Salesforce remains preview-only. Achieved 27/27 local tests with 93% statement coverage.

SALESFORCE GTM SIGNAL LAYER | Salesforce | Apex | Flow | SOQL | Metadata

Deployed signal-driven GTM architecture in a Salesforce Developer Edition org for prioritization, routing and lifecycle governance.

- Created a custom signal object and Lead intelligence fields with before-save Flow routing, validation safeguards, field-level security and permission controls.
- Built bulk-safe Apex rollups and scheduled signal-decay processing; achieved 20/20 Apex tests passing and 96% org-wide coverage, including a 200-record bulk transaction test.

GTM DATA WAREHOUSE | dbt Core | BigQuery | DuckDB | SQL | Dimensional Modeling

Dimensional GTM warehouse spanning accounts, market signals, touches, opportunities and funnel reporting with explicit real and synthetic data boundaries.

- Developed staging, dimensional and incremental fact models with documented lineage and reusable quality tests.
- Achieved 35/35 data tests passing on DuckDB and a real BigQuery sandbox; full dbt build PASS=46, WARN=0.

TECHNICAL SKILLS

Programming: Python, SQL, Apex, SOQL, JavaScript

Backend and APIs: FastAPI, PostgreSQL, REST APIs, webhooks, API integrations

AI Systems: Claude API, tool-using LLM workflows, structured outputs, grounding, evaluation, human-in-the-loop design

CRM and GTM Systems: Salesforce, Salesforce Flow, HubSpot, Clay, Apollo, lead scoring, routing, enrichment, lifecycle architecture

Automation and Data: n8n, retry and failure handling, idempotency, BigQuery, dbt Core, DuckDB, dimensional modeling, ETL/ELT

Infrastructure: Docker, GitHub Actions CI, Prometheus, structured logging, health and readiness checks

CERTIFICATION AND EDUCATION

Claude Certified Architect - Professional | Anthropic | 2026 | Bachelor of Business Administration - Marketing
