

Aditya Chouhan

GTM Engineer — I build the systems revenue teams run on

Mumbai, India · Remote — open to full-time or contract | +91 7020789500 | ai.adityachouhan@gmail.com | linkedin.com/in/aditya-chouhan-gtm | aditya-chouhan.github.io

I build the systems behind revenue — the pipelines that source leads, the tooling that makes reps faster, and the measurement that shows whether it moved the number. Most recently a GTM Engineer at an Anthropic Claude Partner Network AI startup, where I took on revenue ownership within weeks; before that, a founding outbound hire who built my own rep tooling because none existed and generated 136 qualified demos in 60 days. Every project below is public and runnable.

CORE SKILLS

GTM systems: Clay (waterfall-enrichment schema design, verified against Clay's live enrichment API), Instantly.ai (multi-inbox/domain-rotation deliverability), Apollo.io, ActiveCampaign, Pipedrive, LinkedIn Sales Navigator

AI & agents: Claude API (multi-agent orchestration, custom skills), Claude Code, Cursor — built production multi-agent workspaces

Engineering: Python (FastAPI, Streamlit, pytest), TypeScript, Next.js, SQL (Postgres/pgvector/SQLite), Redis/Celery, AWS Lambda, Docker, REST APIs

RevOps: CRM lifecycle design (stage gates, routing, SLAs), signal-based outbound, lead scoring, funnel/attribution design, forecasting, ICP segmentation, partner/agency deal structuring

EXPERIENCE

GTM Engineer — Sydon AI (Anthropic Claude Partner Network member)

Remote — New York, USA · 2026

- Took on revenue ownership within weeks (informal) after presenting a data-backed 120-day GTM strategy for a high-volume SMB ICP.
- Stood up and ran a 6-channel acquisition motion in parallel: cold email, LinkedIn, affiliate, agency/partner, warm-list reactivation, community.
- Designed and built the Signal Engine — reframed outbound from static lists to live distress-signal detection (Severity × Confidence × Recency composite scoring via Easyparser/Rainforest/Keepa APIs); an early batch run scored 2,350 sellers and surfaced 127 in active distress.
- Owned cold-outbound deliverability infrastructure: multi-domain sending rotation, strict plain-text and send-volume policy, bounce and inbox-placement monitoring.

Outbound BDR (Founding Outbound Hire) — Mapog · GIS SaaS

Indore, India · 2025 – 2026

- First outbound hire, zero playbook. Generated 136 qualified demos in ~60 days (14% outreach→opportunity rate, 20% C-suite LinkedIn reply rate).
- Built my own rep tooling layer (7 custom Claude skills, 6 automated workflows) — a team of one, so every minute saved was directly measurable in my own pipeline.

Co-Founder — Hahaha Marketing · Political & Growth Marketing Agency

Nashik, India · 2022 – 2025

- Built the agency to ₹20L lifetime revenue, delivering digital campaigns for the Lok Sabha and Maharashtra Assembly elections alongside commercial clients.

SELECTED PROJECTS — PUBLIC AND RUNNABLE

Revenue Engine System — [write-up](#) · [dashboard](#) · [live CRM](#)

Full lead-to-revenue engine on a disclosed-synthetic 2,080-row CRM: normalized 6-table schema, lead scoring fed by a Clay waterfall-enrichment schema, weighted round-robin routing with a signal fast-lane, a lifecycle state machine enforcing stage-gate fields, 4 multi-touch attribution models (they disagree on the winning channel — the point), forecasting benchmarked to 2025–26 SMB rates, an operational CRM UI in Salesforce Lightning's visual language, and an AI RevOps copilot. 10 pytest checks pass.

Clay Enrichment Waterfall

Ported a six-signal distress-scoring model into Clay as a pre-enrichment qualification gate (11 formula columns, 0 credits) chained to a cheapest-to-most-expensive contact-finding waterfall (native match → Hunter.io → Apollo → AI-guessed pattern, flagged low-confidence). Verified the formula translation against a Python baseline on 20 rows — exact match, 6/20 qualified — then ran the live waterfall through Clay's enrichment API on those 6. Modeled result: gating cut credit spend ~70% (350→105 credits) with zero qualified coverage lost.

Signal Engine & Account Brief Generator — [write-up](#) · [write-up](#)

Public rebuild of Sydon's signal-scoring logic on GitHub commit-velocity data (real finding: +183% acceleration on one repo); brief generator that cites a source per claim, says "no signal" over inventing one.

Lead Intelligence Pipeline — [write-up](#) + [code](#) · [rep dashboard](#)

A 7-stage source→enrich→score→brief pipeline validated on a real public directory (NYC restaurants): live tech-stack fingerprinting, disclosed-weight fit scoring, real duplicate detection (5 multi-location chains found), rep pre-call briefs and dashboard, A/B-tested scoring model. Ports to any vertical with a public account directory.

CERTIFICATIONS & EDUCATION

HubSpot Academy: Sales Hub Software, Inbound Sales, Sales Enablement, Frictionless Sales (2026) · Anthropic Academy: Claude 101, AI Fluency (100%) · BBA coursework, Savitribai Phule Pune University (left before completion to run Hahaha Marketing full-time)
